

Epoxy Flooring

ANTI-SKID

Anti-Skid Selection Recommendations

In general epoxies can become very slippery when wet or greasy if inadequate texture is present.

Tera-Lite, Inc.'s top concern is the safety of our customers. We recommend specific textures for different areas and their usage. Please contact Tera-Lite for custom texture recommendations.

SMOOTH

Dry areas or areas that will not have foot traffic of any kind, such as trenches, and per the Health Department, underneath equipment and counters in kitchen applications for ease of cleaning.

This texture may require a signed release as smooth is not recommended at environments where liquid exposure is present.

Note: There is no such thing as a perfectly smooth glass finish; there will always be some debris from the atmosphere (dust, lint, etc.) that will cause imperfections in the surface.

STIPPLE (AKA ORANGE PEEL)

Dry areas only where smooth is not desirable. This offers little to no anti-skid. This is the only texture for walls and ceilings. This texture may require a signed release as stipple is not recommended at environments where liquid exposure is present.

#70 MESH

Areas such as restrooms with toilets and sinks only, dry storage, and inside walkways, etc.

ALUMINUM OXIDE #60

Similar to #70 Mesh, Aluminum Oxide #60 is a higher quality aggregate with sharper edges and is longer lasting.

This texture will require additional cost. Please contact your sales rep for pricing.

Areas such as restrooms with toilets and sinks only, dry storage, and inside walkways, etc.

FLINTSHOT

ALL wet areas; kitchens, shower rooms, wash down areas, and outside walkways that are not extreme high traffic.

ALUMINUM OXIDE #36

Similar to Flintshot, Aluminum Oxide #36 is a higher quality aggregate with sharper edges and is longer lasting.

This texture will require additional cost. Please contact your sales rep for pricing.

ALL wet areas, kitchens, shower rooms, wash down areas, and outside walkways that are not extreme high traffic.

ROLL-SEED-ROLL / SSF

Extremely high traffic areas, areas with extreme exposure to liquids, outdoor locations.

This texture is an entire system. Please contact your sales representative for pricing and info.

This document represents Tera-Lite, Inc.'s recommendations only from our decades of experience, but the final decision must be made by the owner or the owner's representative. If an anti-skid selection is decided upon that Tera-Lite, Inc. considers a safety concern, a release shall be signed before installation.
